

Flattened ground state: $n_{\text{shell}} = 1$, large circumferences

⋯▲⋯ $N_y = 40, w = 10$
-■- $N_y = 50, w = 12$
—●— $N_y = 60, w = 15$

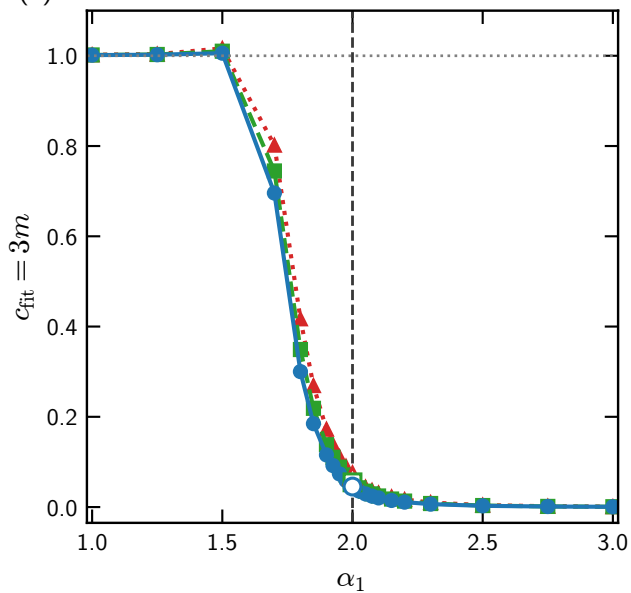

(a) hard / support-truncated

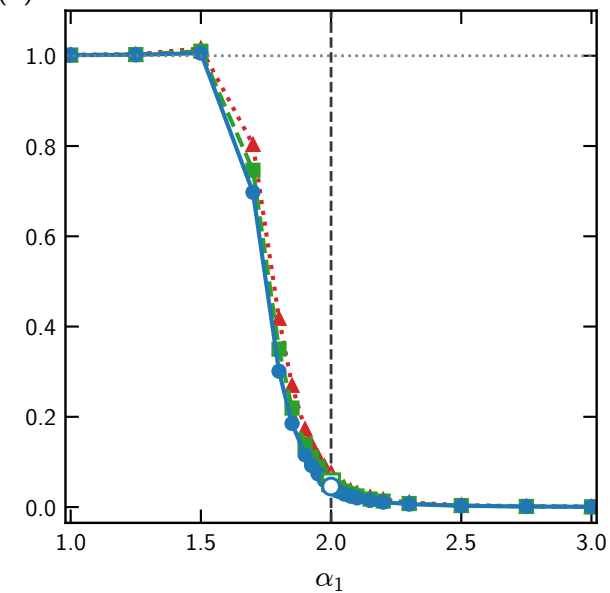

(b) soft / untruncated

(c)

(d)

Horizontal lines: $I_{a,b}^{\text{CFT}} = -(1/3)\log[1 - \sin^2(\pi w/N_y)]$; vertical line: $\alpha_1 = 2$.

Open markers at $\alpha_1 = 2$ denote the symmetric critical-grid prescription.
