

Flattened ground state: $n_{\text{shell}} = 1$, small circumferences

$\cdots\blacktriangle\cdots$ $N_y = 20, w = 5$
 $\cdots\blacksquare\cdots$ $N_y = 24, w = 6$
 $\cdots\bullet\cdots$ $N_y = 28, w = 7$

Horizontal lines: $I_{a,b}^{\text{CFT}} = -(1/3)\log[1 - \sin^2(\pi w/N_y)]$; vertical line: $\alpha_1 = 2$.

Open markers at $\alpha_1 = 2$ denote the symmetric critical-grid prescription.
