

$$R_n = \frac{\min(\delta_n, \delta_{n+1})}{\max(\delta_n, \delta_{n+1})}, \quad \delta_n = \varepsilon_{n+1} - \varepsilon_n$$

$$h_{\text{dis}} = h_{\text{flat}} - \text{diag}(m_{x_i} v_i), \quad v_i \stackrel{\text{iid}}{\sim} \mathcal{N}(0, W^2)$$

$m_x = 1$  only at  $x = 5, 15$ ; zero elsewhere.

$W^2$ : variance; independent potentials for each  $y$  and orbital.

Disorder extends along the full  $N_y = 32$ ; the grid shows half system  $A$ .

□ Exterior   □ Topological slab   ■ Disorder (both orbitals)

$20 \times 32$ ; 100 realizations each;  $A_y = 16$ ;  $y_0 = 0$ ;  $L = 0.99$
