

$$R_n = \frac{\min(\delta_n, \delta_{n+1})}{\max(\delta_n, \delta_{n+1})}, \quad \delta_n = \varepsilon_{n+1} - \varepsilon_n$$

$$h_{\text{dis}} = h_{\text{flat}} - \text{diag}(m_{x_i} v_i), \quad v_i \stackrel{\text{iid}}{\sim} \mathcal{N}(0, W^2)$$

$m_x = 1$ only at $x = 5, 6, 14, 15$; zero elsewhere.

W^2 : variance; independent potentials for each y and orbital.

Disorder extends along the full $N_y = 32$; the grid shows half system A .

□ Exterior □ Topological slab ■ Disorder (both orbitals)

20×32 ; 100 realizations each; $A_y = 16$; $y_0 = 0$; $L = 0.99$
